SPINE SURGICAL INNOVATION

PRESS RELEASE

Swivel Port recognized as one of 3 "Spine Product to Know" in recent Becker's ASC Review feature article.

South Easton, MA, Dec.2, 2008:

In the December 2, 2008 issue of Becker's ASCReview, a leading publication focused on issues effecting procedures in the outpatient setting, Spine Surgical Innovation's Swivel Port was recognized as an important product to know for spine surgeons working in this environment.

Rob Kurtz, the article author, interviewed Dr. James B. Macon; a Neurosurgeon based in Framingham, MA and discussed important new products for spine specialists.

"Recognition of the inherent benefits of the Swivel Port system in this rapidly growing surgical segment by a leading publication like Becker's ASCReview and noting Dr. Macon's experience with this system, provides great exposure to spine specialists interested in making wise investments in MIS systems and instruments. At SSI, our goal is to be the leading 'go to' spine instrument vendor to the ASC marketplace and notice of this top publication is great" says Chris Zorn, Vice President of SSI.
